

Why are we unable to preserve & enhance our immune systems to protect us from contagious diseases & illnesses?

HIGHEST POINT OF LEVERAGE:

Level of focus & policies to enhance & preserve healthy immune systems

Why are we unable to preserve & enhance our immune systems to protect us from contagious diseases & illnesses?

R1 As the level of focus & policies to preserve & enhance healthy immune systems **decreases**, the quality & enforcement of environmental & agricultural protection laws **decreases**...causing the rates of respiratory illnesses and cancers to **increase**.....

This leads to an **increase** in susceptibility to diseases & illnesses, which cause an **increase** in contagious diseases and chronic illnesses...which cause an **increase** in the investments for vaccines, pharmaceuticals, etc. which cause a **decrease** in focus & policies to enhance & preserve healthy immune systems.

R2 As the growth of contagious diseases **increases**, chronic illnesses & terminal conditions in humans **increases**, the value placed on habitat & species loss **decreases**...this leads to an **increase** of contagion between humans & other species leading to an **increase** in contagious diseases.
